

Cloud Backup

- Standard internet connection
- Desktop and Server compatible
- All data stored in Canada ^{1,2}
- Full access to onsite store ^{1,2}
- Minimal install times
- Easy licensing solutions
- “Install and forget” technology
- “Peace of mind with secure data”
- Total hands free solution
- Starts at below \$5 per day ¹
- Unlimited cloud data storage
- 1 year cloud back retention ³
- Infinite cloud retention upgrades ^{1,2}

¹ System backup plan

² Business Continuity plans

³ Frequency of restore points are not changeable

⁴ Ideal as part of a disaster recovery plan

⁵ Extra fees apply if upgrading an existing plan

Seeing yesterdays work should never be roulette

In today's digital society backup is no longer an option. Accidentally deleting files or a failing computer is nothing compared to viruses totally eradicating any way of recovering data without a full offsite copy of your history. The Crypto-Locker virus brought a whole new meaning to “never getting your data back”.

Imagine a backup that never needs your interaction, it just does everything, both onsite storage and a remote cloud based copy that never leaves Canada ^{1,2} (stored in Toronto Datacenter). It really is that good.

We have solutions for file and complete system backup for laptops, desktops and servers. And for mission critical servers complete business continuity features, for example; “server back online,” as fast as minutes not hours, allowing time to find and fix the underlying cause of the breakdown.

Bandwidth usage for the offsite store intelligently takes place outside business hours or can be customized to fit in with your needs. Features such as unlimited offsite stores means no longer worrying about what to backup and how long to keep it.

Contact for a free honest assessment.
